

**Directions for using the Amsler grid.**

Place the grid approximately 12 inches from your eyes, wearing glasses if you need them.

Cover your left eye and look closely at the dot in the center of the grid. Are the lines straight or wavy? Are any parts missing?

Repeat observations with the other eye covered.

People with AMD may see wavy lines.

If the grid is distorted, blurred or discolored, you may have a macular eye problem. Contact an eyecare professional immediately.

People with AMD may see dark or blurry areas.
